

Bob Weight Suggestion

5 Weighted Sections Producing Pick Score: Hitter, SP, H2H, Bullpen, Other

2 Bonus Sections:

Stop-valves

Manual Human Decisions, Exclusive of Bob Weighting

#% = the percentage of weight the given section or factor should be given by Bob out of 100% as he calculates his pick score

Hitter - Total 25%

I was able to reduce the total weighting for this section way down because the stop-valves related to the hitter ensure that only great hitters are being picked, inherently granting heavy weighting to the importance of the hitter without hogging all the Bob model weight which crowds out important additional factors we want weighted.

10% HiPA - Hits per Plate Appearance - last [or up to] 2500 PAs

7% PAs / Game this season

5% HiPA last 500 PAs

3% HiPA last 75 ABs

Starting Pitcher - Total 25%

I was able to reduce this section's total weighting down because the stop-valves related to the SP ensure that pitchers who have nasty stuff & pitchers who prevent hits at an elite level are not pickable against at all. This inherently gives significant weight to the importance of the SP without hogging all the Bob weight which crowds out important additional factors

10% Hits / Inning over last 350 innings

5% Hits / Inning this season regardless of how deep into season we are

10% Stuff+ ranking from Fangraphs for this season only

H2H - Total 20%

10% H2H matchup data

Whiff %, K%, Exit Velo, xBA

5% SP L/R Splits Against Handedness of Hitter, measured by Opponent BA

5% Inferred H2H:

Hitter batting averages and/or xBA verses pitch types from the handedness of the starting pitcher if said SP throws a given pitch type greater than 14% of the time....this could be converted to a stop valve, or extreme data could trigger a stop valve

Bullpen - Total 15%

15% bullpen hits per inning this season - bullpens change a lot so previous seasons can be ignored

Other - Total 15%

3% Boost for Road Game - means guaranteed 9th inning for hitters

3% In-Division matchup means greater familiarity with bullpen

3% Hitter Sprint Speed

3% Ballpark Ranking for Batting Average

3% Other

Stop-Valves

These factors are not assigned a weight, but can either trigger a pick to not show up at all, or to be clearly flagged for a concrete primary concern that for some pickers will make them a hard pass, unpickable, to keep high standards and to save time picking

- Must have seen SP at least 2 PAs
- Hitter is playing in a double header
- Hitter hitting both less than .270 for last 2500 ABs & last 500 ABs
- Precipitation in forecast is greater than 40% Chance
- Opposing team is using an opener
- Hitter has a BB rate of greater than 12% overall this season
- Hitter has a BB rate of greater than 12% overall last 500 PAs
- Hitter has a PAs per game of less than 4.2 this season
- Hitter has a whiff rate of greater than 25% overall this season
- Hitter has a whiff rate of greater than 25% overall in last 500 PAs
- Hitter has a K rate of greater than 22% this season
- Hitter has a K rate of greater than 22% last 500 PAs
- Hitter has a whiff rate of greater than 25% in his h2h with the SP
- Hitter has a K rate of greater than 20% in his h2h with the SP
- Hitter is hitting less than .150 for his last 25 ABs (yes, ABs, not PAs)
- Starter has given up less than .875 hits per inning in his last 200 innings
- Starter has given up less than .875 hits per inning this season, no matter how deep into the season we are
- Starter has given up less than 10 hits in his last 18 Innings
- Starter has a stuff+ rating of higher than 95 this season
- Hitter must hit both L & R at least .265 either over his last 500 or 1500 ABs
- Hitter L/R splits match up properly to handedness of pitcher - This means the hitter must be hitting at least .270 off of the handedness of the pitcher either over his last 500 ABs or his last 1500 ABs
- The pitcher must be giving up an opposing BA of greater than .245 to batters of the same handedness as the hitter both over the last 50 & 200 Inn

Manual Decisions - No Weight for Bob

Is he in the lineup & where? Do a human 5 PA prediction feel
how does protection and the overall lineup look?
